FICHA TÉCNICA I

- Se aplica por primera vez esta serie "Barómetro del Trabajo" estudios de opinión pública a población general vía remota. Por medio de entrevistas llamadas "WAPI", "Web Assisted Personal Interview" Entrevistas aplicadas vía web.

- El estudio se aplica sobre un marco muestral de respondentes reclutados (panel) sobre el cual se selecciona aleatoriamente los entrevistados por comuna. A esa selección se le aplica la cuota.

- La muestra sigue la misma lógica de selección que una muestra probabilística, pero no es probabilística porque la base muestral sobre la cual se selecciona no incluye la totalidad del universo

- Se aplica una matriz de ponderación por sexo, edad y educación por comuna de acuerdo al Censo y sus proyecciones. Se obtiene una localización de los entrevistados lo que permite controlar la además la dispersión de la muestra.
